PROTOTYPING INJECTION MOLDING

We mold your product at superspeed.

PILOT AND PRE-SERIES TOOLS

Using a flexible, master mold-based prototype concept we produce your individual injection-molded components which serve as pre-series parts for your first functional tests and can be used right up to medical approval procedures. The special requirements of your product are already taken into account during the design phase for a subsequent series production. Adaptations or product variants can be carried out quickly and cost-effectively.

- Prototyping
- Prototypes of pilot and pre-series tools
- Fast project phase implementation
- Reliable series production implementation
- Reduction of adaptation loops in series tools
- Cost-efficient and time-saving solutions
